

ESTIMASI POSE TIGA DIMENSI DARI GAMBAR MONOKULER MENGGUNAKAN DEEP NEURAL NETWORK

Nama : Denilson

NPM : 51416815

Jurusan : Teknik Informatika

Pembimbing : Dr. Dharmayanti, ST., MMSi

LATAR BELAKANG

Gunadarma University

Teknologi Digital

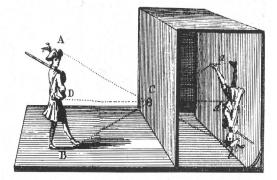

Menghasilkan Data/Jejak Digital

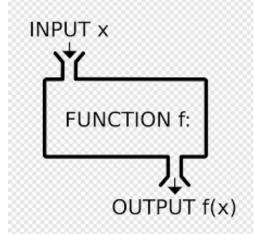

Data Digital Bersifat Laten : Makna tersebunyi; diolah secara khusus

Hilangnya Informasi Posisi Terhadap Kamera Monokuler

Rekronstruksi Ulang dengan Sebuah Fungsi Pemetaan

Estimasi Pose Tiga Dimensi

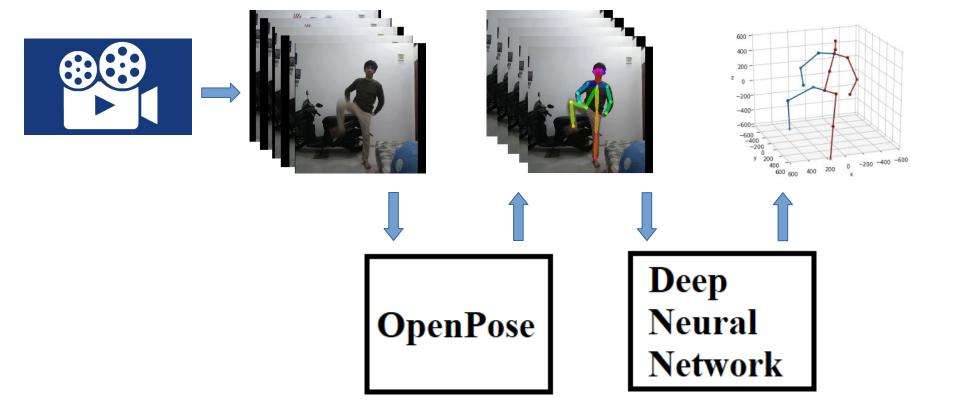

GAMBAR MONOKULER POSE 3D

RUMUSAN MASALAH

OpenPose

Cao et al. OpenPose: Realtime multi-person 2d pose estimation using part affinity fields.IEEE Transactions on Pattern Analysis and Machine Intelligence.

BATASAN MASALAH

- Pose 2D dan Pose 3D berada koordinat lokal
- Area pose tidak bersifat grounded
- Setiap pose menggunakan posisi titik pinggang sebagai titik nol atau tengah

TUJUAN PENELITIAN

Aplikasi:

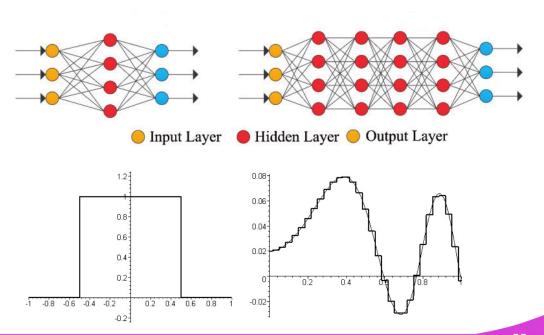

- Estimasi titik kunci pose tiga dimensi dari sebuah citra visual monokuler / datar.
- Fungsi pemetaan / estimasi menggunakan neural network
- Visualisasi

TEOREMA PENAKSIRAN UNIVERSAL

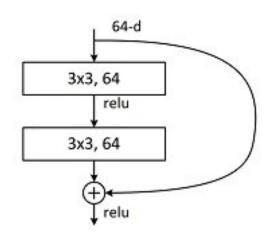

- Sebuah model jaringan feed-forward dapat membentuk fungsi apapun secara subjektif.
- Sebuah model jaringan saraf tiruan dibentuk dari serangkaian lapisan yang didalamnya terdapat deretan sel saraf atau neuron
- Rangkaian lapisan panjang dapat memetakan fungsi yang lebih sulit

PENUTUP

KESIMPULAN:

- Aplikasi estimasi pose tiga dimensi menggunakan model deep neural network berhasil dilatih
- Hasil rata-rata kesalahan akhir 0.0437 (MSE)

PENELITIAN SELANJUTNYA:

- Menggunakan model yang lebih kompleks
- Data dengan domain yang lebih luas seperti estimasi pose pada hewan tertentu.
