### TUJUAN PENELITIAN

### Aplikasi:

- Estimasi titik kunci pose tiga dimensi dari sebuah citra visual monokuler / datar.
- Fungsi pemetaan / estimasi menggunakan neural network
- Visualisasi

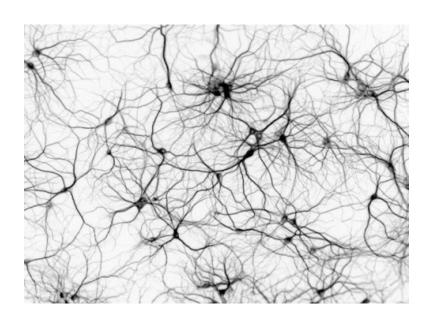

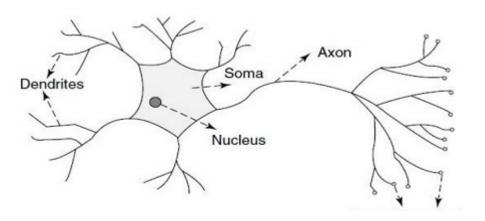

# SISTEM SARAF

### Jaringan Saraf

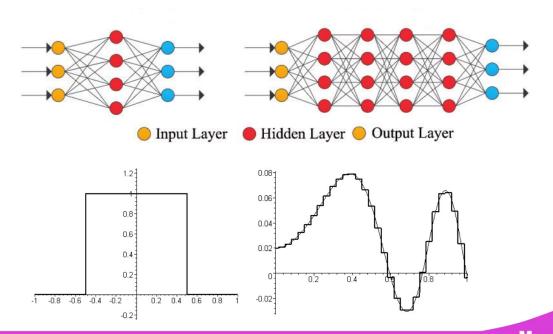

#### TEOREMA PENAKSIRAN UNIVERSAL

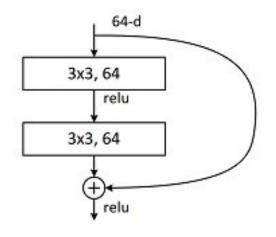

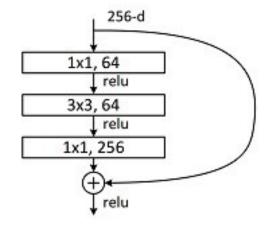

- Sebuah model jaringan feed-forward dapat membentuk fungsi apapun secara subjektif.
- Sebuah model jaringan saraf tiruan dibentuk dari serangkaian lapisan
- Didalamnya terdapat deretan sel saraf atau neuron
- Rangkaian lapisan panjang dapat memetakan fungsi yang sulit

# PENUTUP

#### **KESIMPULAN:**

- Aplikasi estimasi pose tiga dimensi menggunakan modeldeep neuralnetworkberhasil dilatih
- Model melakukan pemelajaran secara mandiri menggunakan data pose 2D sebagai input dan pose 3D sebagai output dengan hasil 0.0437
- Model deep neural networkini masih minimalis, data dengan satu domain, dan memiliki tahapan yang tidak efisien

#### **SARAN:**

- Menggunakan model yang lebih kompleks
- Data dengan domain yang lebih luas seperti estimasi pose pada hewan tertentu.
